Organization Profile/Description

Biocidin® is the flagship brand from Bio-Botanical Research®, Inc., the recognized leader in the field of Botanical Supplements. Biocidin® was founded in response to the needs of physicians addressing the microbiome and systemic health and wellness. Our powerful formulations are clinically tested and evidence-based and have been a favorite amongst recognized healthcare practitioners for overall GI and Gut Health for the past 30 years. In response to a continued request for effective solutions to address problems associated with intestinal ecology, immune system dysregulation and detoxification, we created an end-to-end product portfolio that continues to lead the way in functional and integrative medicine.
